

Next-generation

Klimax DSM

Extreme Engineering. Breathtaking Sound.
The Ultimate Streamer.

5 engineering disciplines

under **1 roof** to create the ultimate streamer...

On the outside

...combined with internal damping,
to protect the electronics from room
vibration. Creating 3 separate areas to
protect the audio signal from interference.

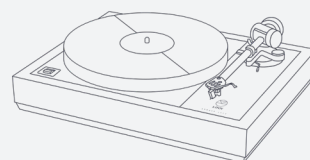

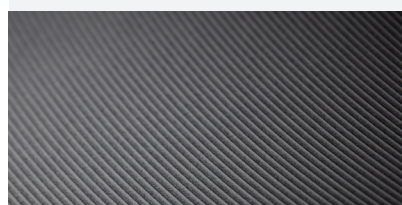

Analogue, digital
& power are separated
for acoustic isolation.

to machine the exquisite
enclosure from solid, special
grade aluminium.

Adding detail like the
**512 precision diamond
cut grooves** on the surface...

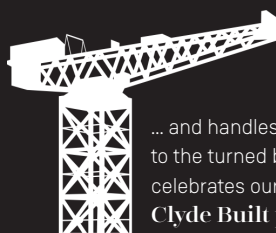

...as homage to our iconic
Sondek LP12
turntable.

Each element is intricately detailed.

Like the precision-cut
dial which glows with...

...through the precisely
photo etched stainless-
steel surround

... and handles so smoothly thanks
to the turned brass bearing, which
celebrates our **5 decades of
Clyde Built** provenance.

Or the **6 stainless steel smart
buttons...**

framing the **1600 x 480 resolution TFT
mirror-finished panoramic display...**
Clearly displaying **key information** when active
and invisible when not in use.

On the inside

Our first ever all-Linn digital to
analogue converter - **Organik
DAC** – the beating heart
of Klimax DSM.

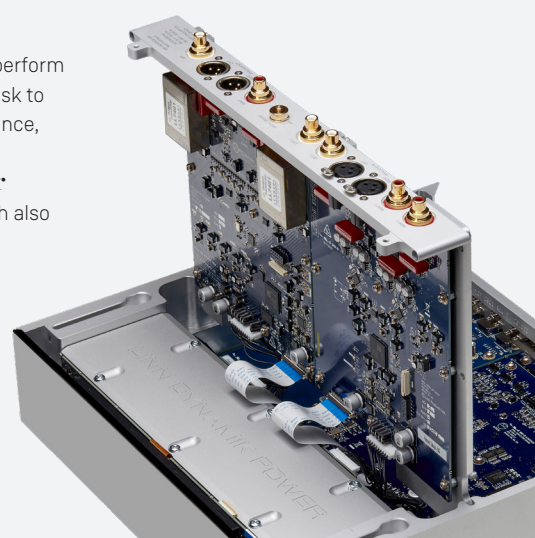

A further **8 individual
circuit boards** each perform
a precise and dedicated task to
ensure optimum performance,
including a new **higher
performance, lower
distortion ADC**, which also
benefits from Organik.

Enabling our most

natural

sound ever.

Every one of its **954
components** is selected,
designed and laid out by a Linn
engineer and populated on a circuit
board at Linn.

... all put together by **1 person**
who builds and signs their name to it
as a mark of pride.

Klimax DSM. The ultimate in music streaming.
